

Cancer Of The Larynx And Hypopharynx

Cancer Of The Larynx And

Laryngeal cancer are mostly squamous cell carcinomas, reflecting their origin from the skin of the larynx.. Cancer can develop in any part of the larynx, but the cure rate is affected by the location of the tumour.For the purposes of tumour staging, the larynx is divided into three anatomical regions: the glottis (true vocal cords, anterior and posterior commissures); the supraglottis ...

Laryngeal cancer - Wikipedia

The goal of treatment is to completely remove the cancer and prevent it from spreading to other parts of the body. When the tumor is small, either surgery or radiation therapy alone can be used to remove the tumor.. When the tumor is larger or has spread to lymph nodes in the neck, a combination of radiation and chemotherapy is often used to save the voice box (vocal cords).
