### **Dimensional Scaling In Chemical Physics**

In dimensional analysis, a ratio which converts one unit of measure into another without changing the quantity is called a conversion factor. For example, kPa and bar are both units of pressure, and  $100 \text{ kPa} = 1 \text{ bar}$ . The rules of algebra allow both sides of an equation to be divided by the same expression, so this is equivalent to  $100 \text{ kPa} / 1 \text{ bar} = 1$ .

Borophene is a crystalline atomic monolayer of boron and also known as boron sheet. First predicted by theory in the mid-1990s in a freestanding state, and then demonstrated as distinct monoatomic layers on substrates by Zhang et al., different borophene structures were experimentally confirmed in 2015. Germanene. Germanene is a two-dimensional allotrope of germanium, with a buckled honeycomb ...

The Froude number (Fr) is the ratio of the inertial forces to the gravitational forces. The Froude number is the non-dimensional factor governing resistance due to surface wave formation (among other things). Named after William Froude, a Nineteenth Century English scientist who was one of the first to use a towing tank.

Discussion basics. Elasticity is the property of solid materials to return to their original shape and size after the forces deforming them have been removed. Recall Hooke's law — first stated formally by Robert Hooke in *The True Theory of Elasticity or Springiness* (1676)... *ut tensio, sic vis*. which can be translated literally into... As extension, so force.

where here and in the following the brackets  $\langle \cdot \rangle$  denote the average over the nodes of the network. In particular the scaling of  $\langle k \rangle$  with N indicates if the network is sparse (which is the case

when  $\langle k \rangle \rightarrow \text{const. for } N \rightarrow \infty$ ). The distribution of degree  $P(k)$  is usually a quantity of interest and can display large heterogeneities, such as is observed in scale-free ...
