Defining the next generation premium car. Audi approached gravity to develop a new research method for front-end innovation. By involving a wide range of internal stakeholders and connecting them with future trend observers, gravity devised a global study across USA, China and Germany that breaks with preconceived notions of luxury and status.

The gravity of Earth, denoted by  $g$ , is the net acceleration that is imparted to objects due to the combined effect of gravitation (from distribution of mass within Earth) and the centrifugal force (from the Earth's rotation).. In SI units this acceleration is measured in metres per second squared (in symbols,  $m/s^2$  or  $m \cdot s^{-2}$ ) or equivalently in newtons per kilogram ( $N/kg$  or  $N \cdot kg^{-1}$ ).

General relativity (GR, also known as the general theory of relativity or GTR) is the geometric theory of gravitation published by Albert Einstein in 1915 and the current description of gravitation in modern physics. General relativity generalizes special relativity and supersedes Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space ...

Geomagnetic field: Geomagnetic field, magnetic field associated with the Earth. It primarily is dipolar (i.e., it has two poles, these being the north and south magnetic poles) on the Earth's surface. Away from the surface the dipole becomes distorted. In the 1830s the German mathematician and astronomer Carl

Gravity is such a pesky thing. It prevents us from doing all sorts of wonderful things. Such as floating through the air like a balloon, traveling into orbit without paying an ugly cost in delta V, and being morbidly obese but still light on your feet like Baron Vladimir Harkonnen. By the same token, it would also be incredibly useful to be able to create gravity on command.
