Easier - Rocks are hard natural materials of mineral origin. Different kinds of rocks make up the crust of our planet Earth. Harder - A rock is defined as an aggregate of mineral grains, which means that rocks are a bunch of mineral grains all stuck together. The mineral grains may be large enough to be seen with the naked eye (phaneritic) or microscopic (aphanitic).

Evaporite formations need not be composed entirely of halite salt. In fact, most evaporite formations do not contain more than a few percent of evaporite minerals, the remainder being composed of the more typical detrital clastic rocks and carbonates. Examples of evaporite formations include occurrences of evaporite sulfur in Eastern Europe and West Asia.
