The business cycle, also known as the economic cycle or trade cycle, is the downward and upward movement of gross domestic product (GDP) around its long-term growth trend. The length of a business cycle is the period of time containing a single boom and contraction in sequence. These fluctuations typically involve shifts over time between periods of relatively rapid economic growth (expansions ...

In economics, a depression is a sustained, long-term downturn in economic activity in one or more economies. It is a more severe economic downturn than a recession, which is a slowdown in economic activity over the course of a normal business cycle.. A depression is an unusual and extreme form of recession. Depressions are characterized by their length, by abnormally large increases in ...

Depression (economics) - Wikipedia

GDP growth is an important driver of trends in the overall budget deficit and the path of public sector debt. Over a 5-year forecast horizon, GDP growth is largely determined by the growth rate of potential output, so it is necessary – implicitly or explicitly – to make judgements about the economy’s underlying growth potential.

Potential output and the output gap - Office for Budget Responsibility - obr.uk

Potential GDP and Underlying Inputs. Estimates, starting in 1949, of potential GDP (the economy’s maximum sustainable output), the natural rate of unemployment (the rate of unemployment arising from all sources except fluctuations in the overall demand for goods and services), and related measures of the labor supply, capital services, and productivity.
