Thymine / ' θ aɪ m ɪ n / (T, Thy) is one of the four nucleobases in the nucleic acid of DNA that are represented by the letters G-C-A-T. The others are adenine, guanine, and cytosine. Thymine is also known as 5-methyluracil, a pyrimidine nucleobase. In RNA, thymine is replaced by the nucleobase uracil. Thymine was first isolated in 1893 by Albrecht Kossel and Albert Neumann from calves ...

Cloning is the process of producing genetically identical individuals of an organism either naturally or artificially. In nature, many organisms produce clones through asexual reproduction. Cloning in biotechnology refers to the process of creating clones of organisms or copies of cells or DNA fragments (molecular cloning). Beyond biology, the term refers to the production of multiple copies of ...

The categories listed below are those that will be used at the Intel ISEF 2019. Local, regional, state and country fairs may or may not choose to use these new categories, dependent on the needs of their area. Please check with your affiliated fair(s) for the appropriate category listings at that level of competition.

Alexis Cooper . Law Enforcement Officials, New Religious Movements, and the Free Exercise Clause . Abstract: On November 18, 1978 the world stood witness to an act of incomprehensible horror—at the behest of one man, almost 1,000 people lost their lives in a mass murder-suicide, dubbed the Jonestown Massacre.

Heavy metals in the Earth's crust are usually available in traces but utilized in many aspects of our daily life i.e., in golf clubs, self-cleaning ovens, cars, antiseptics, plastics, mobile phones, solar panels, particle accelerators and many others. 8 Some heavy metals in trace amounts are also required to carry out biological processes such as copper and iron are helpful in electron ...

This review provides a comparison of the theoretical issues and experimental findings for plasmid DNA and mRNA vaccine technologies. While both have been under development since the 1990s, in recent years, significant excitement has turned to mRNA despite the licensure of several veterinary DNA vaccines.

Molecular testing for the BCR-ABL1 fusion gene by real time quantitative polymerase chain reaction (RT-qPCR) is the most sensitive routine approach for monitoring the response to therapy of patients with chronic myeloid leukaemia. In the context of tyrosine kinase inhibitor (TKI) therapy, the technique is most appropriate for patients who have achieved complete cytogenetic remission and ...

1. INTRODUCTION - OVERVIEW - Biology as a science deals with the origin, history, process, and physical characteristics, of plants and animals: it includes botany, and zoology. A study of biology includes the study of the chemical basis of living organisms, DNA.Other related sciences include microbiology and organic chemistry.
