

*The Behavior Of The Laboratory Rat A Handbook With Tests 1st Edition*

### **The Behavior Of The Laboratory**

Organizational behavior management (OBM) is a form of applied behavior analysis (ABA) which applies psychological principles of organizational behavior and the experimental analysis of behavior to organizations to improve individual and group performance and worker safety. The areas of application may include: systems analysis, management, training, and performance improvement.

An operant conditioning chamber (also known as the Skinner box) is a laboratory apparatus used to study animal behavior. The operant conditioning chamber was created by B. F. Skinner while he was a graduate student at Harvard University. It may have been inspired by Jerzy Konorski's studies. It is used to study both operant conditioning and classical conditioning.

In 1961, the Canadian-American psychologist, Albert Bandura (1925-) conducted a controversial experiment examining the process by which new forms of behavior - and in particular, aggression - are learnt. The initial study, along with Bandura's follow-up research, would later be known as the Bobo doll experiment. The experiment revealed that children imitate the aggressive behavior of adults.
